PROFESSIONAL SUMMARY

Computer Science and Engineering (AI & Machine Learning) student (graduating 2028) with hands-on experience building full-stack web applications using React, TypeScript, Node.js, Express, and Firebase, including authentication, database design, and role-based access rules. Also experienced in Python and deep learning with TensorFlow and Keras. Currently completing a Cloud Computing internship at Precision Infomatic, Chennai. Seeking a Software Developer Intern role to work on real-world frontend and backend codebases.

EDUCATION

Sri Krishna College of Technology (SKCT), Coimbatore
B.E. Computer Science and Engineering (AI & Machine Learning)
Expected Graduation: 2028 | CGPA: 7.6 | Current SGPA: 8.0

TECHNICAL SKILLS

Programming: Python, Java, C++, SQL, HTML, CSS
Web & Backend: Web Development, React, TypeScript, Node.js, Express, REST APIs, JWT, bcrypt, Tailwind CSS
Databases & Cloud: SQL, Firebase Firestore, Firebase Authentication, AWS and Google Cloud fundamentals
AI / Machine Learning: Machine Learning, Deep Learning, TensorFlow, Keras, Prompt Engineering
Tools: Git, GitHub, Jupyter Notebook, Vite
Core Strengths: Problem Solving, Communication, Teamwork

PROJECTS

BloodBuddy – Role-Based Blood Donor Platform | GitHub
Technologies: React, TypeScript, Vite, Tailwind CSS, Express, Firebase Authentication, Firestore

- Built a role-based web platform connecting donors, recipients, blood banks, and administrators using React and TypeScript, with sign-in through Firebase Authentication.
- Designed Firestore database schemas for donor profiles, availability, and blood requests, including blood group, urgency, hospital, and location fields.
- Defined Firestore security rules and documented role-based data-access requirements.

FuelBrain AI – Fuel Detection Web Application | GitHub
Technologies: React, TypeScript, Vite, Tailwind CSS, Express, JWT, bcrypt, Google Maps API

- Developed a full-stack fuel detection application with a React/TypeScript frontend and Express backend.
- Implemented JWT-based authentication, bcrypt password hashing, and Google Maps-based location views.

Chest X-Ray Autoencoder (Convolutional vs. Fully Connected) | GitHub
Technologies: Python, TensorFlow, Keras, Matplotlib, Jupyter Notebook

- Implemented convolutional and fully connected autoencoders in TensorFlow/Keras to reconstruct images from the Chest X-Ray Pneumonia dataset.
- Trained both models for 10 epochs and compared training loss; the convolutional model achieved a lower final loss (approximately 0.013 vs. 0.030).

INTERNSHIP EXPERIENCE

Precision Infomatic (M) Pvt. Ltd. – Cloud Computing Intern
T. Nagar, Chennai | 20 October 2026 – 20 November 2026 (Ongoing)

- Undertaking a one-month internship focused on cloud computing.

CodeAlpha – Web Development Intern

- Developed a Python language-translation tool with a Tkinter GUI using the Google Translate API, supporting text translation across multiple languages.

Codesoft and Pinnacle – Internship / Training Programs (Completed)

CERTIFICATIONS

- AWS Cloud Practitioner (Completed)
- NPTEL – Introduction to Large Language Models (Elite Certificate)
- NPTEL – Introduction to Machine Learning
- Google Cloud Computing Foundations (In Progress)
- Also completed: AI & ML Essentials; Cybersecurity in LLM; Front-End Framework Fundamentals; Python Programming Basics

ACHIEVEMENTS

- TCS CodeVita Season XIII – Global Rank 12808 (Rank Certificate)
- Google Cloud Badge – Introduction to Responsible AI
- 2nd Prize, Prompt Battle – Kanam, NGP College, Coimbatore
- 3rd Prize, MindTech Mania – Kanam, NGP College, Coimbatore
